New Listings

From 2025 to 2026, Airbnb's global performance was evaluated through listing distribution, revenue, occupancy rates, and reservation trends. The analysis highlights variations in market performance across cities and countries, helping identify key growth opportunities and changing hospitality trends.

Global Airbnb Performance Dashboard

Market Share by City

Ubud, Tsubobeng, Vung Tau, and Wellington account for the highest number of listings among the cities shown.

Ubud leads in total listings and superhosts. Popular amenities include backyard, hair dryer, microwave, and Wi-Fi.

Global Airbnb Performance Dashboard

Review frequency

Most listings receive a low number of reviews. 86.5% of listings have only 1 review, while 96.6% have 2 or fewer reviews. After 3 reviews, the cumulative share reaches 98.8%, and 99.9% of listings have 5 or fewer reviews. Only a small fraction of listings receive a very high number of reviews, with the maximum observed being 283 reviews.

Trust

Host distribution and listing characteristics provide insights into the Airbnb market. Currency and extra host fees reflect differences in listing pricing, while guest capacity highlights the variety of accommodation options available to travelers.
